BLOAT PASTURE SPRAY

A COMPOUND TO AID CONTROL OF BLOAT IN CATTLE

DIRECTIONS FOR USE

BLOAT PASTURE SPRAY is a highly refined miscible oil which forms an emulsion that is suitable for pasture spraying when mixed with water.

Spray Application Rates

Use 85 mls of BLOAT PASTURE SPRAY per cow per day, 4.5 litres will protect 50 cows per day. For typical grazing situations BLOAT PASTURE SPRAY can be made up as follows; mix 4.5 litres of BLOAT PASTURE SPRAY with 95 litres of water to cover the area to be grazed by 50 cows in one day. To ensure adequate penetration on pastures which have been idle and show heavy growth, the amount of BLOAT PASTURE SPRAY used may need to be greater than 4.5 litres in 95 litres of water. Conversely, less BLOAT PASTURE SPRAY than 4.5 litres per 95 litres of water may be required on paddocks with a lower animal feeding capacity.

Drench Application

Use BLOAT PASTURE SPRAY **WITHOUT DILUTION** (Neat) as a drench at the rate of 113 mls per cow.

Mixing

The spray tank should be half filled with water, then with the agitator operating the required quantity of BLOAT PASTURE SPRAY should be added to the tank followed by the remainder of the water. Recirculation should continue until completion of spraying. Emulsions that have been allowed to stand for any length of time may begin to separate. To re-emulsify the solution, recirculate through the pump or stir vigorously in the holding tank.

Spraying

The use of a boom spray is recommended to ensure optimum coverage, penetration and minimise losses due to wind drift. BLOAT PASTURE SPRAY will wash off with heavy rain. Re-spraying is necessary as soon as possible.

Grazing

Strip-grazing with the use of electric fences of the selected pasture will simplify the spraying requirements and thereby assist in controlling bloat. Ensure that all the selected pasture is adequately treated including those areas that can be reached outside the fence line. Avoid back-grazing as young shoots that are not treated are bloat inducing.

WITHHOLDING PERIOD

Zero (0) Days

Trade Advice

EXPORT SLAUGHTER INTERVAL: Zero (0) Days

SAFETY DIRECTIONS

Will irritate the eyes. May irritate the skin. Avoid contact with eyes and skin. When opening the container and preparing the spray wear elbow-length PVC gloves and face shield or goggles. If product in eyes, wash out immediately with water. Wash hands after use. After each day's use, wash gloves and face shield or goggles.

FIRST AID

If poisoning occurs, contact a doctor or Poisons Information Centre. Phone Australia 131126.

MATERIAL SAFETY DATA SHEET

Additional information is listed in the Material Safety Data Sheet which can be obtained from the supplier.

Protection of Wildlife, Fish, Crustaceans and the Environment

Do not contaminate streams, rivers or waterways with the chemical or used containers.

Disposal

Triple or (preferably) pressure rinse into the medicated water. Do not dispose of undiluted chemicals on-site. Break, crush, or puncture and bury empty containers in a local authority landfill. If no landfill is available, bury the containers below 500mm in a disposal pit specifically marked and set up for this purpose clear of waterways, vegetation and roots. Empty containers and product should not be burnt.

Storage

Store below 30°C (Room Temperature) store in a cool dry place, keep container closed and protect from light.

Hazard Statements

Causes serious eye irritation. Harmful if swallowed

Precautionary Statements

Wash hands thoroughly after handling. Do not eat, drink or smoke when using this product. If swallowed rinse mouth. Call a POISON CENTER or doctor if you feel unwell. Wear eye protection. IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses if present and easy to do. Continue rinsing. If eye irritation persists get medical advice.
